## Abstract of the Disclosure

A means for auxiliary manual operation on a bistable  
multiway valve comprising a valve member able to be  
10 reciprocated with the performance of a switching movement and  
furthermore operating device extending athwart the direction  
of the switching movement.

There is a provision such that the operating device  
comprises at least two mutually parallel plungers, which on  
15 operation act on second different flanks of the valve member,  
operation of one plunger locking the respectively other  
plunger.
